MAJOR

MJ A1: Introduction to Computers

Credits 04 (FM: 75)

Course Objectives:

- Understand the fundamental concepts and characteristics of computers, including their generation and classification.
- Comprehend the basic components of a digital computer, including CPU, ALU, CU, Register set, and memory hierarchy.
- Gain knowledge of communication pathways, input/output devices, and the primary, secondary, cache, and virtual memory.
- Demonstrate proficiency in number systems, including binary, decimal, octal, and hexadecimal, along with arithmetic operations and complement notation.
- Understand data communication principles, components, and modes, as well as the basics of computer networks, network topologies, and types.
- Familiarize themselves with operating systems, their functions, classification, and the concepts of multi-programming, multi-tasking, and multi-processing.
- Gain insights into the booting process and the role of assembler, loader, linker, and interpreter in program execution.

Course Outline:

Introduction to Computers: (60 Lectures)

1. Introduction: (8 Lectures)

- Definition of computers.
- Classifications of Computers (Micro, Mini, Mainframe, Supercomputers).
- Software/Hardware concepts.
- Terminology (Bit, Byte, Word, Nibble, Computer Languages).

2. Basic Components of Computer: (12 Lectures)

- Computer organization (CPU, CU, ALU, Register set, Communication Pathway, Input/output Devices, Memory Module).
- Understand CPU components: Control Unit (CU), Arithmetic Logic Unit (ALU), and Register set.
- Explore Communication Pathway: Bus, Internal & External Bus, Control, Address & Data Bus.
- Examine Input devices (Keyboard, Pointing devices) and Output devices (Soft copy, hard copy devices).
- Memory Hierarchy: Primary Memory, Secondary Memory, Cache Memory, Virtual Memory.

3. Number System: (15 Lectures)

- Cover Binary, Decimal, Octal, Hexadecimal systems and interconversion.
- Explore Binary-Decimal-Octal Hexadecimal arithmetic, signed & unsigned numbers.
- Learn Complement notation (r 's & $(r-1)$'s complement), Addition & Subtraction using complement notation.
- Dive into Floating-point representation, Computer codes (Weighted binary, Non-weighted binary, Alphanumeric), BCD addition, Gray to Binary & Binary to Gray conversion.

4. Data Communication and Computer Network: (15 Lectures)

- Define data communication, examine characteristics, and components.
- Explore modes, media (guided & unguided) for data transmission.
- Understand Channel capacity, delve into Computer Network concepts (Network topology, Types of networks).
- Explore network devices (Hub, Repeater, Switch, Bridge, Router, Gateway).
- Gain basic understanding of e-mail, Search engines, Chatting, Internet conferencing, and Intranet.

5. Operating System: (10 Lectures)

- Define Operating System (OS), understand functions, necessity, classification (CUI & GUI, Single-user, Multi-user).
- Explore concepts: Multi-Programming, Multi-Tasking, Multi-Processing, Booting Process.
- Understand basics of Assembler, Loader, Linker, and Interpreter.
